

System Security Plan — Standard Language Blocks

OWNER	Cybersecurity Office — CCoE
VERSION	v4.2
EFFECTIVE DATE	2026-05-18
REVIEW DATE	2026-11-18
APPLICABILITY	All systems in the Army cyber portfolio under CCoE cognizance
APPROVAL AUTHORITY	CISO
RELATED TEMPLATES	Control Implementation Statement Frames v3.0
SUPERSEDED DOCUMENTS	SSP Language Blocks v4.1

Pre-approved boilerplate for the boundary, environment, and roles sections of an SSP. Replace bracketed values; do not alter approved sentence structure without ISSM concurrence.

1. System Identification

System Name / Acronym	Logistics Network Node 04 (LOGNET-04)
eMASS ID	EM-104558
System Type	Major Application
Authorization Pathway	Full ATO
Impact Level (FIPS 199)	Moderate-Moderate-Moderate

2. Authorization Boundary (approved language)

The authorization boundary for LOGNET-04 encompasses all hardware, software, and network components within enclave VLANs 210–214 at the primary hosting facility, including two application servers, one database cluster, and the dedicated management segment. Interconnections to SUPPLY-NET are governed by ISA-2026-014. Components outside this boundary, including user workstations, inherit protection from the installation campus area network.

3. System Environment (approved language)

LOGNET-04 operates in a government-owned, contractor-operated data center at Impact Level 4. The operating environment consists of virtualized RHEL 9 and Windows Server 2022 hosts on the approved enterprise hypervisor baseline, patched per the CCoE patch management SOP. Physical and environmental protections are inherited from the hosting facility (see inherited controls matrix, Appendix C).

4. Roles and Responsibilities (approved language)

Authorizing Official (AO)	Accepts risk for system operation; signs authorization decisions.
ISSM	Maintains the security program; validates package quality prior to submission.
ISSO	Executes daily RMF operations, ConMon evidence collection, and POA&M upkeep.
System Owner	Resources remediation; accountable for milestone commitments.

5. Revision Log

v4.2 — 2026-05-18	Updated boundary frame for cloud-inheritance language per Cloud Governance v3.0.
